
Project Title

Superstore Sales Analysis Dashboard

Objective

To analyse sales data and identify trends in customer behavior, regional performance, and product categories to support business decision-making.

Tools Used

- Python (Pandas) – Data Cleaning
 - SQL Server – Data Analysis
 - Tableau – Visualization
-

Key KPIs

- Total Sales: \$2.25M
 - Total Orders: 4,916
 - Total Customers: 793
 - Average Order Value: \$230
-

Key Insights

1. Overall Business Performance

The business generated **\$2.25M in total sales across 4,916 orders from 793 customers**, with an average order value of **\$230**, indicating a healthy transaction size and consistent customer activity.

2. Regional Performance Insight

The **West region is the top-performing market**, followed closely by the East, while the South region significantly underperforms. This suggests strong regional imbalance and highlights an opportunity to improve sales strategies in underperforming regions.

Business meaning:

- Expand in South

- Study West's success model
-

3. Category Performance Insight

Technology is the highest revenue-generating category, outperforming Furniture and Office Supplies. This indicates strong demand for tech products and suggests prioritizing inventory and marketing efforts in this category.

Insight depth:

- Tech = growth driver
 - Others = stable but secondary
-

4. Customer Segment Insight

The **Consumer segment contributes the largest share of sales**, followed by Corporate and Home Office. This shows that individual consumers are the primary revenue drivers, making them a key target for retention and marketing strategies.

5. Top Customers Insight

A small group of customers (Top 10) contributes a disproportionately high amount of revenue, with the top customer generating significantly higher sales than others. This indicates **customer concentration risk**.

Business action:

- Retain top customers
 - Reduce dependency
-

6. Customer Behaviour Insight

The customer distribution shows that **most customers place between 4–8 orders**, with very few high-frequency buyers. This suggests moderate repeat behaviour but also highlights an opportunity to increase customer engagement and retention.

7. Strategic Insight

While the business demonstrates strong overall performance, it is heavily dependent on specific regions, categories, and high-value customers. Diversifying regional performance and improving customer retention strategies will be key to sustainable growth.

Recommendations

- Focus on expanding sales in underperforming regions (especially South)
- Strengthen marketing for high-performing categories like Technology
- Implement retention strategies for high-value customers
- Improve engagement to increase repeat purchase frequency

Conclusion

The analysis reveals strong overall business performance with clear opportunities in regional expansion, customer retention, and category optimization.
